**Horizontal borehole through anticline**
- High
- Low
- High

**Horizontal borehole through syncline**
- High
- Low
- High

More generally (ignoring labels at top):
- Borehole parallel to strata. Unlikely situation: vertical borehole in vertical strata

More generally (ignoring labels at top):
- Strata folded with fold axis perpendicular to hole and with *convexity* toward side of hole on which log is centered.

More generally (ignoring labels at top):
- Strata folded with fold axis perpendicular to hole and with *concavity* toward side of hole on which log is centered.
